FÜRSTENFELDBRUCK, February 2017

Güntner Coil Defender – New addition to corrosion protection portfolio

Cold rooms with aggressive atmosphere where, for example, foodstuffs are processed and stored require corrosion-resistant units. It is precisely these applications for which Güntner introduces the Coil Defender, a high-quality yet reasonably priced addition to our corrosion protection portfolio in the Compact product line.

Corrosion protection with HACCP certification

Particularly in the sensitive food sector, e.g. for the storage of citrus fruits, in fermentation interrupters and in processing rooms, the Güntner Coil Defender is a high-quality solution for all cases that require a unit with increased corrosion protection and where stainless steel would be over the top. The powder coating, evenly applied to the entire coil, reliably protects the conventional material combination of copper/aluminium from corrosion. The food-related Plus: The powder coating is food-safe and thus perfectly adds to the HACCP-certified Güntner air coolers. The Coil Defender is a standard option for all air coolers of the Compact product line.

Easy to clean

Also cleaning is naturally highly important in the food sector. Those air coolers equipped with Coil Defender are designed in a way that facilitates cleaning – in addition, the Coil Defender powder coating is resistant to conventional cleaning agents.

For more information on the innovative Coil Defender, please visit our Güntner website: www.guentner.com

About Güntner

Based in Fürstfeldbruck near Munich, Germany, Güntner GmbH & Co. KG is a world leader in the manufacture of refrigeration and air conditioning equipment components. With approx. 3,000 employees worldwide and production sites in Germany, Hungary, Romania, Indonesia, Mexico, Brazil and Russia, the company shows a strong presence for their partners in all markets. Decades of experience in the industry and the consistent integration of the latest technologies and research findings ensure the high quality standard of Güntner solutions. The international areas of application comprise energy & process cooling projects, industrial and commercial applications in the field of food production and storage as well as HVAC applications for buildings and specific applications such as server room cooling.
